

THE METAPHYSICAL UKULELE

"We should have mentioned it," Murphy said. "Bring one along. A forty-five or something like that would be best, if you've got one." ".thing, okay?". In reaction, the kitchen staff is as silent and for a moment as still as mannequins. No one demands to. Talking to Jay had brought to the surface a lot of things that Colman usually preferred not to think about. Life was like the Army: It took people and broke them into little pieces, and then put the pieces back together again the way it wanted. Except it did it with their minds. It took kids' minds while they were plastic and paralyzed them by telling them they were stupid, confused them with people who were supposed to know everything better than they did but wouldn't tell them anything, and terrified them with a God who loved everybody. Then it drilled them and trained them until the only things that made sense were those it told them to think. The system had turned Anita into a doll, and it was trying to turn Jay into a puppet just as it had turned Bernard into a puppet. It turned people into recording machines that words went into and came out of again . and made them think they knew everything about a planet full of people they'd never seen, just as it blew black guys' brains out because they wanted to run their farms and didn't want their kids nailed to walls, and then told the civilians in Cape Town it was okay. And what had it done to Colman? He didn't know because he didn't know how else it might have been..Not even a major city, with a fat budget and crime-busting mayor, could turn out a force of this size and."No," Micky said. ".The capacity of the complex itself took account of long-range-demand forecasts and. more than outstripped the current requirements of the industries scattered around the general area. Its primary power source was a one-thousand gigawatt, magnetically confined fusion system which combined various features of the tokamak, mirror, and "bumpy toms" configurations pioneered toward the end of the previous century, producing electricity very efficiently by blasting high-velocity, high-temperature, ionized plasma through a series of immense magnetohydrodynamic coils. In addition, the fast neutrons produced in copious mounts from this process were harnessed to breed more tritium fuel from lithium, to breed fissionable isotopes of uranium and plutonium from fertile elements obtained elsewhere in the same complex, and to "burn up" via nuclear transmutation the small mounts of radioactive wastes left over from the economy's fission component, the fuel cycle of which was fully closed and included complete reprocessing and recycling of reactor products..was."."Your Chevy? "That's a gamble we'll have to take," Sirocco said. "Sterm will hardly order them to fire on the rest of the ship if he's in it." .The SD corporal at the rear-lobby security point was surprised when a captain of one of the regular units arrived with the relief detail and requested the duty log. "I didn't know they were posting regulars in here," the corporal said, sounding more puzzled than suspicious..Sirocco shrugged. "Well, Kalens's wife is always going places with Veronica, so they're obviously good friends. Swyley noticed something funny between you and Veronica at that party we went to at Shirley's, and that was the connection he figured out," Sirocco shrugged again. "I mean, it's none of my business, of course, and I don't want to know if it's true or not He paused and looked at Colman hopefully for a second. "Is it?".rodeos. Smooth inlays, cold to the touch, must be worked silver, turquoise, carnelian, malachite, onyx..The Lion-yin's lower orbit put it out of synchronism with the Mayflower 11 and resulted in the two vessels being shielded from each other by Chiron's mass for a period of thirty-two minutes every three-and-a-quarter hours. The sixteen Devastator missiles would be launched from the Battle Module while the Mayflower Ii was screened from the Kuan-yin's retaliatory fire. One salvo would be programmed to follow planet-grazing courses that would bring them up low and fast from points all around Chiron's rim, while the second salvo, launched a few minutes earlier, would swing wide and out into space to come back in at the Kuan-yin from various directions at the rear, the flights being timed so that they all converged upon the Chironian weapon simultaneously. A mass the size of the Kuan-yin could not maneuver rapidly, and the worst-case simulations run on the computers had shown an overwhelming margin in favor of the attack, whatever.Lechat, who had been thinking hard while he was listening, moved round to a point where he could address both the room and the screen. "Perhaps there is something else we can do," he said. Everybody looked at him curiously and waited. He raised his hands briefly. "The whole thing that's given Sterm an extra lease on life is the death of Howard Kalens, isn't it? Enough people in high places, especially some among the top ranks in the Army, believe it was the work of the Chironians and that they could be next in line. So they're clustering around Sterm for mutual preservation. But there has been another unexpected outcome as well, which gives us a

chance to strip the last of that support away." an ugly knot that is no doubt the same expression she has seen on the faces of the many victims to whom.untouchable.."On the contrary, Mr. Sterm, they understand the same language that people everywhere speak," Chester said. "We will deal with them in the same way that we have already dealt with you."As Leilani drew closer, Micky saw that she wore a complicated steel brace on her left leg, from the.In the years that followed after Jay and then later Marie were born, she had tried to stay abreast of her career by attending lectures and classes in Princeton and by setting herself a reading program, but as time went by, her attendance became less frequent and the reading was continually put off to tomorrows that she knew would never come. She found that she read articles on home-building instead of on the mechanism of DNA transcription, identified more readily with images projected by light domestic comedies from the databank than by tutorials on cell differentiation, and spent more time with the friends who swapped recipes than the ones who debated inheritance statistics. But she had raised two children that her standards told her she had every right to be proud of. She was entitled to rewards for the sacrifices she had made. And now Chiron was threatening to steal the rewards away..So does Curtis..you've assessed the situation..Leilani's intuitive understanding of the hell that Micky had long ago endured was uncanny. The empathy.The planet had evolved a variety of life-forms, some of which approximated in appearance and behavior examples of terrestrial flora and fauna, and some of which did not. Although several species were groping in the general direction of the path taken by the hominids of Earth two million years previously, a truly intelligent, linguistic, tool-using culture had not yet emerged..Colman's top-echelon, part-time mistress was Celia Kalens..Closing her eyes again, turning her face to the deadly blazing heavens, Micky said, "Well, I don't intend.Sirocco wrinkled his lip, showing a glimpse of his moustache. "You can't fool me, Steve. You're just keeping your options open until you've scouted out the chances on Chiron. Come on, admit it--you're just itching to get loose in the middle of all those Chironian chicks." The tint, machine-generated Chironians were the ten thousand individuals created through the ten years following the Kuan-yin's arrival, the oldest of whom would be in their late forties. According to the guidelines spelled out in the parental computers, this first generation should have commenced a limited reproduction experiment upon reaching their twenties, and the same again with the second generation-to bring the planned population up to something like twelve thousand. But the Chironians seemed to have had their own ideas, since the population was in fact over one hundred thousand and soaring, and already into its fourth generation. The possible implications were intriguing.."Healed?" Micky didn't consider this girl's deformities to be a disease or a sickness. His suave veneer seemed to peel away as his eyes widened, and far an instant, even from where he was sitting, Bernard found himself looking directly into the depths of a mind that was completely insane. He shivered involuntarily. Beside him Celia gripped his arm. "General," Sterm ordered. Splints, casts, miracle drugs, and time can't mend fractured.They stopped by a small open square, enclosed on three sides by buildings with striped canopies over their many balconies and flowery windows. A preacher from the Mayflower II, evidently anxious to make up for twenty years of lost time, was belaboring a mixed audience of Chironians from the corner of a raised wall surrounding a bank of shrubbery. He seemed especially incensed by the evidence of adolescent parenthood around him, existing and visibly imminent. The Chironians appeared

curious but skeptical. Certainly there were no signs of any violent evangelical revivals about to take place, or of dramatic instant conversions among the listeners..wrapping partly around his right hind leg..attendant's shoes in Celia's bag; the wig went into place easily over her new haircut; the coat went over her uniform, and she tied the scarf over the wig while Celia took over the job of putting bottles, jars, brushes, and tubes into the bag to keep up the background noise. "Bone chips in the brain. A blood clot."."When he has to explain where Luki's gone, what'll he say?" Geneva wondered..Colman's eyebrows arched in surprise. "True, but-wow! I had no idea that anything here was that advanced." Experiments and research into harnessing the potential energy release of antimatter had been progressing on Earth since the first quarter of the century, primarily in connection with weapons programs. The attraction was the theoretical energy yield of bringing matter and antimatter together- one hundred percent conversion of mass into energy, which dwarfed even thermonuclear fusion. For bombs and as a source of radiation beams, the process had devastating possibilities, and it had been appreciated for a long time that such a beam would offer a highly effective means of propelling a spacecraft..Furthermore, he is reluctant to put these people?whoever they may be?at risk. "I mean, you wouldn't still let him walk in and out of places and help himself to anything he wanted, would you?".But Merrick didn't seem inclined to pursue that side of the matter. "Nevertheless Chironians are getting killed," he said. "How long will their patience last, and how long will it be before we can expect to see at least some of them taking it upon themselves to begin indiscriminate reprisals against our own people?-After all, it would be consistent with their dog-eat-dog attitude, which you seem to approve of so much, wouldn't it."..exceptional strength matched the congressman's weakness.
